A personal website with your portfolio/CV (Focus: HTML & CSS)

You have to create a personal website where you describe who you are and where you are from. The website should be a portfolio/CV where you include your personal info (it will not be shared anywhere), your work experience, information about your home town/country, and a page that describes why you chose to study at VIA.

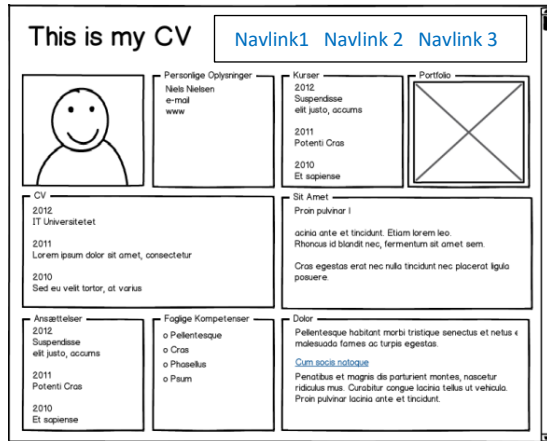

Figure 1: Example of how a frontpage could look.

The website is an individual assignment.

1) The front page should be your CV/portfolio that must include the following:
    a. Your name, age, and VIA email (the email should be an email link).
    b. A current (and real – no cartoons etc) picture of you (if you don't want to include a picture, you should use a blank person/profile picture like shown above).
    c. Your work/study experience so far. If you want to link to or include some of your earlier work, you can do that too.
2) The front page (with your CV/portfolio) should have a navigation bar with links to the different content, and should **at least** contain links and websites for the following:
    a. A description/presentation of your home town/country (whatever you prefer) with pictures and text.
    b. A short description of VIA with picture(s) and text. You should also describe and make a list of at least 3 reasons why VIA was the perfect choice for you

3) Use CSS to organize and style the content.
4) "Borrow" pictures from the internet or make/take your own (remember to optimize images for web).
5) Maybe you want to dazzle your users by including media (sound, video) on the website.
6) No in-line styling allowed (be professional).
7) No flexbox or CSS grid.
8) No frameworks allowed.
9) No JavaScript allowed (yet) - only HTML and CSS.
10) Validate all files and correct errors before handing in.

Hand-in in one packed (only .zip files, **_NOT_** .rar or .7z) in Itslearning.

Have fun ☺
